## Oil Safe®

### Help reduce contamination and decrease operating costs

The Oil Safe® range of products are ideal for the storage and administration of fluids and oil lubricants. Oil Safe® consists of various size drums and dispensing lids, which are fully interchangeable to meet the customer's specific lubrication requirements.

The lids are available in ten different colours to help in creating a coloured coded system. There are five different lids (three with incorporated spout), five different size drums ranging from 1,5 to 10 litres (1,6 to 10.5 quart).

In addition, there are two different spout hose attachments and one pump that can be used with the Oil Safe® utility lid.

- The unique 'O' ring sealing, twist spout and lid design, keep rain, dust and other contaminants out. This helps result in a reduction in the damage caused to plant machinery by the use of contaminated lubricants.
- Containers are heat and chemical resistant. They contain UV radiation stabilisers and anti-static agents. The products are durable and the contents are protected from environmental damage even in the harshest of conditions
- Manufactured from HDPE (High Density Polyethylene) grade polymers, helps prevent rust and makes product suitable for indoor and outdoor use
- Lids come in ten different colours allowing different colours to be used for different oils. Colour coded labels are also available to identify the contents
- Drums all have wide mouth openings which allows for fast, non-spill filling from bulk sources
- Drums are compact (1½, 2, 3, 5 and 10 litre), and ergonomically designed. Makes the product easier to lift and carry
- Drums are see-through and have measuring scales so that fluids and oil lubricant levels are easy to measure and contaminants can easily be seen
