

Application

The precut machinery shims and shim kits are all intended for accurate alignment of machinery equipment such as electrical motors, gear boxes, generators etc. Four different kits to cover a wide range of applications are available.

Description

The SKF precut shims are made of stainless steel and the kits consist of a selection of the SKF precut machinery shim sets TMAS series. The shims in the kits are supplied in a sturdy aluminium carrying case with slots for each of the shim sizes.
